

ARAVO FOR PROCUREMENT: FROM CHAOS TO CLARITY

THE CHAOS

Managing supplier risk in procurement is chaotic. There are more stakeholders, systems, and data to consider to ensure compliance than ever before.

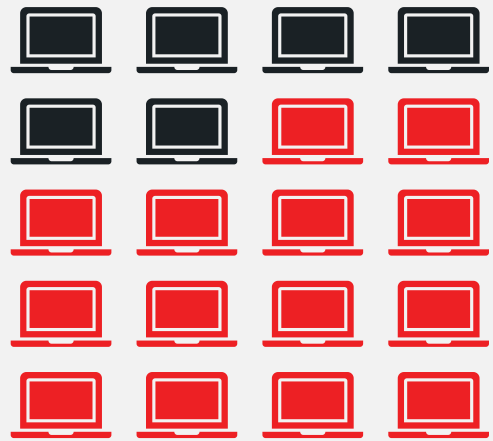

Just a few of these data points include:

GDPR/CCPA
Code of Conduct
Financial Health
Data/IT Security
ABAC Compliance
Operational Risk
Conflict Materials
Business Continuity
Supply Chain Resilience
Contracts
ESG
Banking/Tax Info
Personnel
Virtual/On-Site Audits
Issue Management
Reputational Risk
Quality Management
Corrective Action Plans
Performance Management
Diversity Classification

MORE COMPLICATIONS

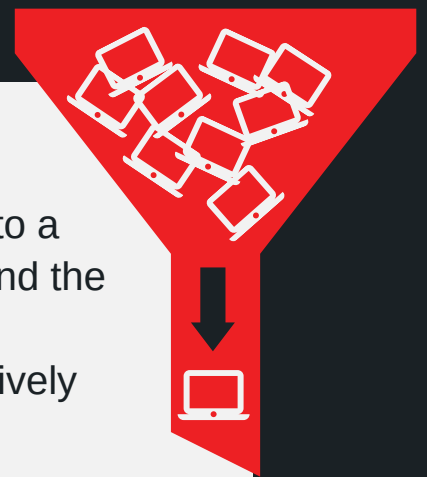

As there is no centralized system that manages this chaos end-to-end, organizations today are forced to navigate:

- Siloed and disparate systems
- Manual and inconsistent processes
- Unsecure email & spreadsheet-driven assessments

THE CLARITY

Centralizing these stakeholders and data into a single platform creates increased visibility and the ability to more efficiently mitigate risk and noncompliance situations before they negatively impact your organization.

THE ARAVO IMPACT

At Aravo, we provide the ability to manage the full lifecycle of supplier relationships from qualification, due diligence, onboarding, monitoring, and more in one, easy-to-navigate platform.
